

August 2016 has been the hottest August ever measured by NASA's Goddard Institute of Space Studies. In fact, it's also the 11th consecutive month to break that record. Moreover, NOAA (US National Oceanic and Atmospheric Administration) reports that each of the last 16 months were the warmest they've ever measured since records began in 1880. You know you're in serious trouble when you're breaking a record every month, 16 times in a row.
